

Website Style Guide

A guide to the style choices for my portfolio website

Website Overview

This website will serve as a platform to showcase my artwork to the world. My goal is for it to function not only as a portfolio but also as a creative space where others can view, appreciate, and engage with my work. I want visitors, especially other artists to be able to comment on and like my art, helping me identify my strengths, such as character design, and continue growing as an artist.

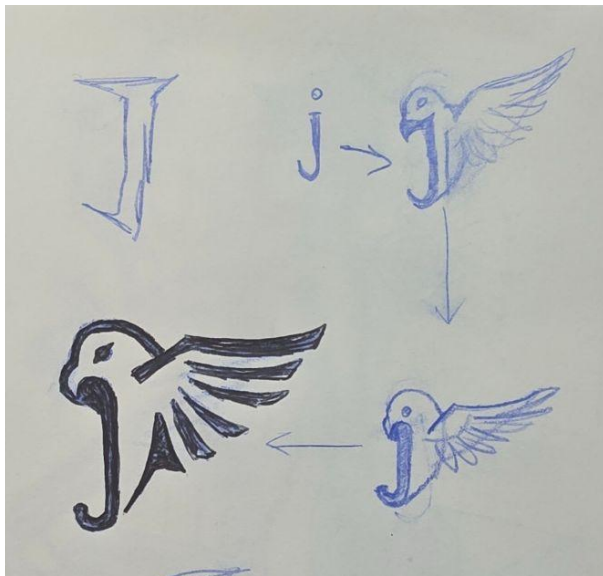

Purpose Statement

The purpose of this website is to represent my identity as an artist by providing a space where my work can be displayed, critiqued, and shared with others.

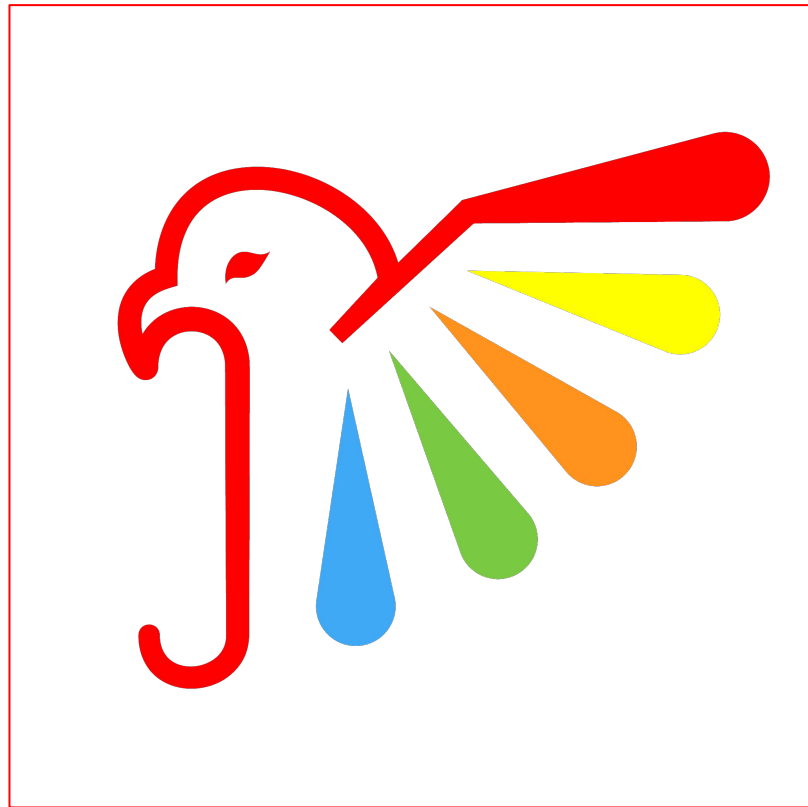

Audience

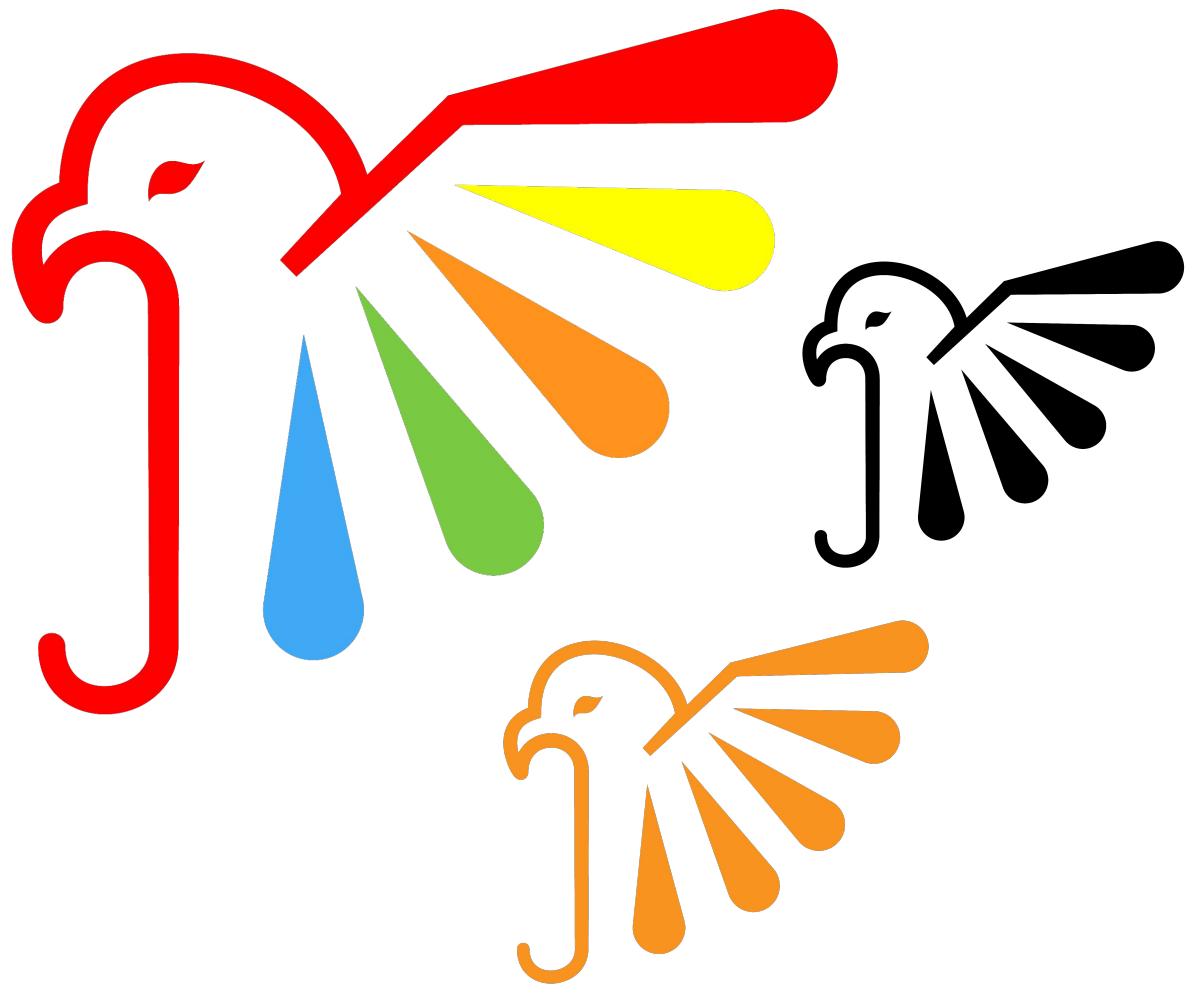

- Aspiring digital artists seeking inspiration
- Potential collaborators or clients in animation
- Art enthusiasts who enjoy stylized character design

Color Palate

To incorporate the uniqueness of the logo and its colors, I implemented the colors into the websites color palate to introduce a more harmonious color choice.

The Main colors are simple using black white and grey for background and navegation colors throughout the website, but it is complimented by four bright colors that break the greyscale of the website making it fun to look at.

Welcome to My Website!

Hi!

My name is Jostin and this is my website. I'm creating this website to have a space to share my art, and share my interests in character design with other people around the world. Feel free to navigate around and take a look at my portfolio, or go to the community section and share your thoughts/comments/suggestions on my OC's (Original Characters).

I love fantasy and creating characters of my own since I was 12. Here you can see all of my designs and get inspired by them if you'd like. <3

***Feel free to contact me anytime via email,
instagram or text message.***
